Using Photovoice and Participatory Video with Youth
CYFAR 2009 workshop that explores the background and history of a youth project that uses photovoice and participatory video. Photovoice is a method that enables people to define for themselves and others, including policy makers, what is worth remembering, and what needs to be changed. Participatory video empowers youth by teaching soft skills and positive attitudes, engages people in a fun and interactive way, and amplifies voices via sharing strengths and concerns. It involves three phases: pre-production, production, and post-production. Examples are included.
