## **Annual Report Tips**

- Make it attractive
- Use graphics to highlight information and display data
- Tailor the content and layout to your audience
- Only give them what they want
- Highlight the important points through effective use of color, fonts, italics, bold, etc.

## **Annual Report Outline Example**

The annual report should start with the most important information. It should be concise and as formal as the audience needs it to be. In a highly formal report, all of the following should be included:

- Front cover
  - o Title of program and its location
  - Name of evaluators
  - Period covered by the report
  - Date report is submitted
- Summary or abstract
  - o What was evaluated?
  - Why was the evaluation conducted?
  - o What are the major findings?
  - What are the major recommendations?
  - Were there any decisions to be made?
- Background information concerning the program
  - Write this section while planning the evaluation
  - Include program origin, goals and characteristics, and clients, staff, and others involved in the program
- Description of the evaluation study
  - Make it detailed
- Purposes of the evaluation
  - Who requested the evaluation?
  - o Who is the evaluation intended to enlighten?
  - O What data were collected?
  - Were the instruments developed or purchased?
  - o Give the instruments' reliability and validity
  - What are the limitations of the measures?
- Data collection procedures
  - Describe data collection schedule
  - o How were data collected?
  - Was training provided to data collectors?
  - Was sampling used? Explain and give results

- Always write results section after all data is collected, analyzed, recorded in tables, graphed, and analyzed.
- o Make it come alive with testimonials or interview excerpts.
- o Present the results of findings from the data.
  - How many pretests were given?
  - What were the results of the pretest or per measure compared to the final results?
  - Describe what the program finally looked like
  - If alterations occurred to the implementation, what effect did they have?
  - Describe any data contamination
  - Describe the differences and similarities between the different sites investigated
  - Describe attrition: How many who started in the sample were still in the program at the end?
