Active and Engaged Citizenship

**Instrument:** Active and Engaged Citizenship

**Scale/Subscale Name:** Active and Engaged Citizenship

**Year:** 2009

**Target Audience(s):** Youth

**Language other than English available:** No

**Type:** Attitudes and Behavior

**Data collected:** Quantitative

**Data collection format:** Self report - Pre/post

**Reading Level:** Flesch-Kincaid Grade level: 5.6

**Existence of test/technical manuals, user guides, supplemental materials:** Survey available by request from Richard M. Lerner, Institute for Applied Research in Youth Development, Eliot-Person Department of Child Development, 301 Lincoln Filene Building, Tufts University, Medford, MA 02155. email: richard.lerner@tufts.edu

**Level of training necessary for administration/scoring/interpretation:** None

**Widespread Use/Professional Endorsements:** This survey has been used between 2005 and present to model pathways of positive youth development and outcomes such as Contribution, Depression, and Risk Behavior. The five C model, upon which this measure is based, is currently being endorsed for the development of asset rather than deficit based intervention/prevention programming.

**Cost of Use:** There is no cost associated with use of the survey or its scales; however, proper citation of developers is necessary and the developer's request that any findings that may be relevant to the further development of the survey be shared.
Description:
- This 26-item scale is an integrated measure of civic engagement that assesses emotional, cognitive, and behavioral components, including:
  1. Sense of generalized reciprocity
  2. Ability to be involved in civic society and democracy
  3. Desire to make positive contributions to the community
  4. Participation in activities to better the community
- This includes three subscales of a larger instrument developed by Bobek (doctoral dissertation) and published by Bobek, Zaff, Li, and Lerner (2009).
- Bobek developed these subscales by adapting items from various sources (see notations on instrument).

Psychometrics:
Information on reliability and validity are provided below. If information on a particular psychometric was not found, it is indicated as “no information provided.” It should be noted that this is not necessarily an indication of a lack of reliability or validity within a particular scale/instrument, but rather a lack of rigorous testing, for various reasons, by the developers or other researchers.

Reliability: A correlation of at least .80 is suggested for at least one type of reliability as evidence; however, standards range from .5 to .9 depending on the intended use and context for the instrument.

Internal Consistency: Cronbach’s alpha’s for the three factors in the scale are Civic Duty = .80, Civic Skills = .91, and Civic Participation = .73
Inter-rater reliability: No information provided
Test-Retest: No information provided

Validity: The extent to which a measure captures what it is intended to measure.

Content/Face Validity: Items for this scale were developed using a three-step expert rater validation process.
Criterion Validity: No information provided
Construct Validity: Indicators of convergent and discriminate validity were built into the expert rater process, with results used to refine the measure. A confirmatory factor analysis indicated that scale items correspond to the hypothesized factors.

**Civic Skills:**

If you found out about a problem in your community that you wanted to do something about (for example, illegal drugs were being sold near a school, or high levels of lead were discovered in the local drinking water), how well do you think you would be able to do each of the following?
