- 7 items regarding parent’s reports of parent-child affective quality.
Psychometrics:
Information on reliability and validity are provided below. If information on a particular psychometric was not found, it is indicated as “no information provided.” It should be noted that this is not necessarily an indication of a lack of reliability or validity within a particular scale/instrument, but rather a lack of rigorous testing, for various reasons, by the developers or other researchers.

Reliability: A correlation of at least .80 is suggested for at least one type of reliability as evidence; however, standards range from .5 to .9 depending on the intended use and context for the instrument

- **Test-Retest**: .84-.86
- **Internal Consistency**: No information provided
- **Inter-rater reliability**: No information provided

Validity: *The extent a measure captures what it is intended to measure.*

- **Content/Face Validity**: No information provided
- **Criterion Validity**: No information provided
- **Construct Validity**: No information provided
